THE VITAL STATISTICS SYSTEM IN CALIFORNIA

STATE REGISTRAR:	DIRECTOR OF CALIFORNIA STATE DEPARTMENT OF HEALTH SERVICES
OFFICE OF STATE REGISTRAR:	The State Registrar's functions are performed by the Office of State Registrar, which:

- Maintains a permanent public record of each birth, death, marriage, and marriage dissolution which has occurred in California since 1905.

- Provides certified copies of California vital records or searches the permanent central registry to verify the occurrence of vital events in California.

- Prepares and maintains computer files of state birth, death, marriage, and divorce data and monitors these files for data quality.

- Builds and continues cooperative relationships with federal, state, and local agencies including the National Center for Health Statistics, which collect, maintain, and use vital records/statistics.

- Develops forms, standards, and guidelines for registration of all vital events occurring in the State of California.

- Directs and monitors the state-delegated functions of approximately 180 local offices which register California's vital events in order to assure statewide compliance with the statutory mandate for uniform application of registration laws, policies, and procedures.

PREFACE

The purpose of this annual vital statistics report is to present information which can be used as a basis for health policy decisions, planning, and epidemiologic research; it is also designed to provide California's governmental agencies, businesses, industries, and citizens with information on the vital statistics of their State.

The sources of the data included in this report are certificates of live birth, death, and fetal death which occurred during 1983 and which were registered with the Department of Health Services. Data on marriages, legal separations, judgments of nullity, and dissolutions of marriage are not included in this report. These data will be made available as they are released from the Office of State Registrar.

Chapter 6, entitled "Sources, Quality, and Limitations of Data," gives information needed for correct interpretation and analysis of the data, and provides a description of the vital statistics registration system in California. Chapter 7 includes definitions used to calculate the rates and ratios used throughout the report.

NOTE: Population data used as denominators for calculating rates of vital events in this publication were prepared by the Population Research Unit of the California Department of Finance. For the reader's convenience, this publication provides state and county populations so that rates can be calculated when desired.

Vital rates in this publication with population as a denominator were calculated using the latest population data available. Consequently, these rates may differ from previously published rates.

HIGHLIGHTS

LIVE BIRTHS

California had 435,722 resident live births in 1983; 6,091 (1.4 percent) more than in 1982.

The crude birth rate of 17.3 live births per 1,000 population dropped slightly from the 1982 rate of 17.4

Since 1979, the annual rate of increase for the total number of live births in California has slowed perceptibly. Despite this, the 1983 California birth rate was considerably higher than the United States' birth rate of 15.5 per 1,000 population.

- General fertility rate

In 1983, California's general fertility rate was 71.9 live births per 1,000 women ages 15–44, a decrease of only 0.4 percent over 1982. California's general fertility rate remained well above the United States' general fertility rate of 65.8

- Age-specific birth rates

In general, California birth rates in 1983 increased for women in each age group between ages 25 and 44 and decreased for women in age groups between ages 15 and 24. The birth rates for women ages 30–34 and 35–39 continued the upward trends begun in 1976. The birth rates for women ages 25–29 and 40–44 continued the upward trends begun in 1979. The birth rate for women ages 20–24 reversed the upward trend begun in 1979 and turned down in 1983. The birth rate for women ages 15–19 continued the downward trend begun in 1982. The 1983 birth rates for women under age 15 and for women 45 and over were unchanged from the 1982 levels.

All of California's age-specific birth rates (with the exception of females under the age of 15 and 15–19) exceeded the respective United States' rates.

- Birth order

California birth rates by live birth order changed very little from 1982 to 1983. Birth rates for the second, third, fourth, and fifth or higher live birth orders showed small increases of 0.9, 1.9, 2.3, and 2.9 percent respectively, while the rate for the first live birth order decreased by 2.6 percent.

Women ages 30–39 showed notable increases for 1983 in first and second live birth order rates. For women ages 30–34, first and second live birth order rates increased by 9.4 and 4.7 percent, respectively. For women ages 35–39, first and second live birth order rates increased by 12.0 and 10.1 percent, respectively.

FETAL DEATHS

In 1983, there was an 8.5 percent drop in the number of reported fetal deaths and a 10.3 percent drop in the fetal death ratio from 1982. The number of fetal deaths fell from 3,333 in 1982 to 3,049 in 1983, and the fetal death ratio dropped from 7.8 to 7.0.

Over one-half of all 1983 fetal deaths were to women ages 20–29; women ages 30–34 had 18.5 percent. The proportions of the total fetal deaths experienced by the very young mothers ages 15–19, 12.9 percent, and older mothers ages 35–39, 9.1 percent, were higher than their respective proportions of total live births.

Out of 3,049 fetal deaths in 1983, 2,280 were White and 448 were Black. Mothers of Spanish/Hispanic origin (regardless of race) had 916 fetal deaths.

INFANT DEATHS

There were 4,226 infant deaths in 1983, eight more than in 1982. However, the infant death rate fell by 1.0 percent to a new low of 9.7 infant deaths per 1,000 live births.

• Sex and age

In 1983, 55.1 percent of all infant deaths were male and 44.9 percent female. Almost two-thirds of all infant deaths (2,711) occurred during the first 27 days of life, with over half (2,269) occurring during the first 6 days.

• Race

Age-adjusted infant death rates fell in 1982 for White Spanish and Blacks by 9.1 and 3.3 percent respectively, but increased by 3.5 percent for White non-Spanish.

Despite substantial declines in the age-adjusted Black infant death rate, the 1982 rate is still 85.0 percent higher than the age-adjusted White Spanish infant death rate and 66.3 percent higher than the White non-Spanish rate.

• Cause of death

"Certain Conditions Originating in the Perinatal Period" were responsible for 44.7 percent of all infant deaths, an increase of 2.8 percent over 1983.

"Causes Specific to Perinatal Period," namely congenital anomalies, accounted for 24.3 percent of the infant deaths and 27.7 percent of the neonatal deaths.

Almost three-quarters of all postneonatal deaths (1,135) were due to "Causes Not Specific to Perinatal Period." The largest single cause of death within this group was "Sudden Infant Death Syndrome" (SIDS). There were 616 postneonatal deaths and 34 neonatal deaths due to SIDS in 1983.

DEATHS

The number of 1983 California resident deaths was 188,018, a decrease of 237 from 1982. The crude death rate fell from 7.6 deaths per 1,000 population in 1982 to 7.5. Since 1976, the death rate has fluctuated within the narrow range of 7.5 to 7.8.

- Sex and age

Over 65 percent of all 1983 deaths were to residents 65 years old and over.

The number of male deaths was greater than the number of female deaths in all age groups except 80 and over.

- Sex and age-specific rates

Age-specific death rates for males in all age groups decreased from 1982 levels. The largest drop was 6.9 percent for 15–24-year-olds. Among females, the death rate for females ages 5–14 rose by 7.9 percent from 1982; and the death rate for 15–24-year-olds fell by 8.5 percent.

- Leading causes of death

"Diseases of the Heart," the number one cause of death, accounted for 66,552 deaths in 1983, 1.0 percent fewer than in 1982. Deaths from "Malignant Neoplasms," the second leading cause, rose slightly to 43,058 an increase of 0.7 percent. Deaths from "Cerebrovascular Disease," the number three cause, decreased to 14,939, a drop of 4.3 percent.

The largest decrease in any of the leading causes of death was the 5.7 percent drop in "Homicides"; "Suicides," fell by 3.1 percent.

"Accidents and Adverse Effects" was the leading cause of death for both males and females ages 1–34. "Accidents and Adverse Effects" and "Diseases of the Heart" tied as the leading cause of death for males ages 35–44. "Malignant Neoplasms" was the leading cause of death for females ages 35–74. "Diseases of the Heart" was the leading cause of death for males ages 45 and over and for females ages 75 and over. SIDS was the third ranking cause of death for infants, accounting for 374 male and 276 female infant deaths.

VITAL STATISTICS OF CALIFORNIA: 1983

POPULATION

Age and Sex

- California's median age in 1983 was 30.7 years. A reflection of the State's aging population, it was 2.7 percent higher than the median age of the 1980 Census (29.9) and 9.3 percent higher than the 1970 Census (28.1). The median age of California's women in 1983 was two years higher than the median age of men, 31.7 versus 29.7.
- Another indication of the aging California population was the sharp decrease between 1970 and 1983 in the proportion of the population that was under 20 years. In 1970, persons under 20 comprised 36.8 percent of the population; but by 1983, only 29.9 percent of the population were under 20 years of age. Conversely, the proportion of 20–39-year-olds increased from 27.9 percent in 1970 to 35.0 percent in 1983.
- In 1983, California's population included almost as many males (49.3 percent) as females (50.7 percent). Comparable United States' figures[1] show proportionately more females (51.4 percent) than males (48.6 percent) in the nation's population. California women outnumbered men in each of the five-year-age groups 40 and over, while men outnumbered women in the five-year-age groups under 40 years.

LIVE BIRTHS

Number and Rate

- California registered 435,722 live births to California residents in 1983 (Table 1–1), a gain of 6,091 (1.4 percent) over 1982. This increase was just under two-thirds of the increase that occurred from 1981 to 1982. Since 1979, the rate of growth in the number of total live births to California women has been declining. The difference between 1982 and 1983 marked the fourth consecutive year that the annual percent increase was less than the year before, even though it was the tenth straight increase in the total number of live births.
- California's 1983 crude birth rate slipped to 17.3 live births per 1,000 population, down from the 1982 rate of 17.4. The upward trend in the crude birth rate that began in 1974 stabilized in 1982. The rate of 17.4, reached in 1981 and 1982 represents the highest crude birth rate since the 1970 rate of 18.1.
- California's 1983 crude birth rate was 11.6 percent higher than the United States' crude birth rate of 15.5. While California's crude birth rate dropped by only 0.6 percent from 1982 to 1983, the United States' rate dropped by 2.5 percent for the same period. California's crude birth rates have been higher than the United States' rate since 1975 when the crude birth rates were almost identical at 14.7 and 14.6, respectively. During this eight-year period, the California rate grew by 17.7 percent while the United States' rate grew by only 6.2 percent. This disparity in birth rate increases is due in part to the greater increase in the number of women of childbearing age (15–44) in California relative to that of the United States. National statistics[2,3] show that from 1975 to 1983 the number of women ages 15–44 grew by 16.2 percent in the United States while California's increase was 24.5 percent for the same period.

[3] Department of Commerce, Bureau of Census, ***Current Population Reports***, Estimates of the Population of the United States, by Age, Race, and Sex: July 1, 1970 to July 1, 1981, Series P–25, No. 917, July 1982.

General Fertility Rates for California and the United States

- In 1983, the general fertility rate was 71.9 live births per 1,000 women of childbearing age (15–44) (Table 2–2), a slight decrease from the 1982 rate of 72.2. This year's rate also represents the first decrease in California's general fertility rate since 1978. During the early to mid-1970s, California's general fertility rate dropped rapidly, from 84.7 in 1970 to a low of 64.8 in 1973. Since 1973, the general fertility rate has increased every year except 1975, 1978, and 1983.

- The California general fertility rate was 9.3 percent higher than the United States' rate (71.9 compared to 65.8) in 1983. The United States' rate, like the California rate, dropped between 1982 and 1983, from 67.3 to 65.8. While California's rate has shown an overall upward trend since 1973, the United States'rate has fluctuated between 65.0 and 68.8, reaching 1983 with a net decrease of 4.4 percent. During the same time period, the California rate rose by 11.0 percent. Interestingly enough, California's general fertility rate has been higher than the United States' rate only since 1976. From 1970 to 1975, the United States' rate was higher than that of California.

Age-Specific Live Birth Rates

- Between 1982 and 1983, the age-specific live birth rates for California women increased for each five-year age group between 25–44. The rates for females under 15 years, and 45 and over were unchanged, while rates for 15–24 year-olds fell.

- The age-specific birth rate for women ages 35–39 rose from 27.6 per 1,000 in 1982 to 29.2 in 1983, an annual increase of 5.8 percent. This follows a jump in the rate of 6.2 percent between 1981 and 1982 and represents the highest rate for this age group since 1970 when the rate was 29.5. The age-specific birth rate for women ages 30–34 showed the second highest annual increase, gaining 4.6 percent, with the rate rising from 71.1 per 1,000 in 1982 to 74.4 in 1983. For the second straight year, the birth rate for this age group has exceeded the previous high rate of 70.8 in 1970. The age-specific birth rate for women ages 40–44 showed the third highest annual increase, gaining 3.6 percent, with the rate rising from 5.5 per 1,000 in 1982 to 5.7 in 1983. The current rate is the second highest rate reached for this age group since 1970. The age-specific birth rate for women ages 25–29 increased 0.3 percent, from 117.1 per 1,000 in 1982 to 117.4 in 1983. This is the second highest rate reached by this age group since 1970.

- Females ages 15–19 and 20–24 showed decreases in birth rates between 1982 and 1983. The birth rate for 15–19 year-olds fell for the second straight year, to 50.6, a drop of 2.7 percent from 1982, and the lowest rate over the 14-year period from 1970. Women ages 20–24 experienced a decrease in their birth rate of 2.0 percent, down from 118.7 in 1982 to 116.3 in 1983.

Age-Specific Live Birth Rates for California and the United States

- In 1983, birth rates for women in the five-year age groups 20 and over were greater for California than for the United States (Table 2–2). Table 2–2 also shows that the United States' birth rates for females under 15 years of age have been greater than the California rates since 1970. California's birth rate for women ages 15–19 dropped below the United States' rate in 1982 after surpassing the United States' rate in 1981 for the first time since 1970. The most significant percentage differences between California and the United States in the 1983 age-specific birth rates were for the age groups 30–34, 35–39, and 40–44. The California rates were greater by 15.2, 32.1, and 50.0 percent, respectively. As recently as 1975, the differences were, in order, 7.1, 4.6, and 4.3 percent and in 1970 the United States' age-specific birth rates were greater than California's for these age groups by 3.5, 7.5, and 12.5, respectively. In other words, while the United States' birth rates for these three age groups have decreased or increased slowly the rates for these age groups in California have increased dramatically.

Birth Order

- California's birth rates by live birth order increased between 1982 and 1983 for second, third, fourth, and fifth or higher live birth orders by 0.9, 1.9, 2.3, and 2.9 percent, respectively. The 1983 rates for second, third, and fourth live birth orders are at their highest levels since the early 1970s. The birth rate for fifth or higher birth orders increased in 1983 after decreasing in 1981 and 1982. Since 1970, there had been a persistent downward trend in the birth rate for the fifth or higher birth orders in both California and the United States, dropping 53.3 percent in California from 7.5 in 1970 to 3.5 in 1983 and dropping 70.5 percent for the United States from 8.8 in 1970 to 2.6 in 1983. The only birth order rate in California to decrease between 1982 and 1983 was the rate for first live births, which was down from 30.9 in 1982 to 30.1 in 1983, a drop of 2.6 percent.

- California live birth order rates continued to exceed the United States rates for all birth orders. The California birth rate for first live births exceeded the national level in 1975, the rate for fifth or higher live births exceeded the national level in 1976, the rate for fourth live births, in 1979, and the rates for both second and third live births, in 1981.

Age of Mother and Live Birth Order

- The most dramatic increases in California's age-specific birth rates by live birth order between 1982 and 1983 were for first and second birth orders to women ages 30–39 and second birth order to women ages 40–44 (Table 2–4). For women ages 30–34, the birth rate for first births increased 9.4 percent from 18.1 per 1,000 women in 1982 to 19.8 in 1983 and the rate for second order births increased 4.7 percent from 23.3 in 1982 to 24.4 in 1983. For women ages 35–39, the birth rates for first births increased 12.0 percent from 5.0 in 1982 to 5.6 in 1983 and the rate for second order births increased 10.1 percent from 6.9 in 1982 to 7.6 in 1983. For women ages 40–44 the birth rate for second order births increased 25.0 percent from 0.8 in 1982 to 1.0 in 1983.

- First and second birth order rates decreased between 1982 and 1983 for women in the 15–19 and 20–24 year age categories. For women 15–19, first and second birth order rates dropped by 3.4 and 2.1 percent; for women ages 20–24, first and second birth order rates decreased by 3.8 and 1.0 percent, respectively. The third birth order rate increased by 7.1 percent from the 1982 rate for women 15–19, but rose only 0.7 percent for women ages 20–24. Birth rates by birth order changed very little from 1982 levels for women ages 25–29.

FETAL DEATHS

Number and Ratio

- In 1983, there was an 8.5 percent drop in the number of reported fetal deaths (20 weeks or more gestation) and a 10.3 percent drop in the fetal death ratio (number of fetal deaths per 1,000 live births) (Table 1–1). The number of fetal deaths fell from 3,333 to 3,049, while the fetal death ratio dropped from 7.8 to 7.0. There has been an overall downward trend in the fetal death ratio since 1950, when the ratio was 15.1. The decrease in the fetal death ratio was greater than the decrease in the number of fetal deaths because there was a simultaneous increase in the number of live births. As a result, there were fewer fetal deaths per 1,000 live births.

Age of Mother, Race, and Spanish/Hispanic Origin

- Of the 3,049 fetal deaths in 1983, 27.4 percent occurred to women ages 20–24, 27.4 percent to women ages 25–29, 18.5 percent to women ages 30–34, and 12.9 percent to 15–19 year-olds (Table 3–3). Women 35–39 had 9.1 percent of all fetal deaths while women 40–44 had 2.0 percent.

- The distribution of fetal deaths by age of mother was similar to that of live births. However, a comparison of the age distributions between live births and fetal deaths reveals that very young mothers, 15–19, and older mothers, 35–44, had higher proportions of fetal deaths than of live births. The reverse was true for women 20–34. Specifically, mothers 15–19, 35–39, and 40–44 had in order, 11.6, 6.2, and 0.9 percent of the total live births. Proportions of fetal deaths for the same age groups were, in order, 12.9, 9.1, and 2.0 percent. Women 20–24 and 25–29 had 30.8 and 31.5 percent of the total live births respectively, while each of these age groups had 27.4 percent of the total fetal deaths. Women ages 30–34 had nearly even proportions of live births and fetal deaths (18.7 percent of the live births and 18.5 percent of all fetal deaths).

- Table 3–1 shows that in 1983, of the 3,049 fetal deaths, 2,280 (74.8 percent) were White and 448 (14.7 percent) were Black. There were 270 (8.8 percent) fetal deaths to all other race groups and 51 (1.7 percent) were not stated. Mothers of Spanish/Hispanic origin (persons of Spanish/Hispanic origin can be of any race) had 916 (30.0 percent) of all fetal deaths (Table 3–2).

- Different patterns were found when fetal deaths were distributed across five-year age groups by race/ethnicity of the child (Table 3–1) and by Spanish/Hispanic origin of the mother (Table 3–2). In comparing fetal death by race/ethnicity of the child with the age of the mother, there was a greater proportion of Black fetal deaths among young women, ages 15–29, and a greater proportion of White fetal deaths among older women, ages 30–44. For example, women ages 15–19 accounted for 19.4 percent of Black fetal deaths and 12.6 percent of White fetal deaths. Conversely, women ages 30–34 and 35–39 accounted for 19.0 and 9.5 percent, respectively, of White fetal deaths and only 12.9 and 6.3 percent of Black fetal deaths. (Note: Caution should be taken when evaluating the incidence of fetal deaths because it appears that registration of fetal deaths is not complete.)

- Among Spanish/Hispanic mothers, those ages 15–19 accounted for 16.0 percent of fetal deaths and those ages 30–34 and 35–39 accounted for 16.3 and 10.3 percent, respectively.

INFANT DEATHS

Number and Rate

- There were 4,226 infant deaths in 1983, eight more than the 4,218 of 1982 (Table 1–1). The number of infant deaths fell during 1981 and 1982, after reaching a high of 4,451 in 1980. The 1980 figure represented the highest number of infant deaths since 1972, when 4,877 infant deaths were reported. The number of infant deaths dropped to an all-time low of 4,134 in 1976.

- Infant deaths during 1983 consisted of 2,711 neonatal deaths (under 28 days of age) and 1,515 postneonatal deaths (28 days to one year of age) (Table 4–1). The number of neonatal deaths increased by 25 from 1982 to 1983, after reaching a record low of 2,686 in 1982. The number of postneonatal deaths dropped by 17 to 1,515, the lowest number since 1979. The proportion of neonatal deaths to the total number of infant deaths has declined since 1970. In 1983, infant deaths consisted of 64.2 percent neonatal deaths and 35.8 percent postneontal deaths, while in 1970, the distribution of neonatal and postneonatal deaths was 73.6 and 26.4 percent, respectively.

- While the number of infant deaths in 1983 rose slightly from 1982, the infant death rate fell by 1.0 percent to a new low of 9.7 infant deaths per 1,000 live births. The infant death rate has decreased every year since 1965, when the rate was 22.1. However, the percent decrease in the infant death rate from 1982 to 1983 was the lowest percent decrease since 1965. The neonatal death rate fell by 1.6 percent to 6.2 deaths per 1,000 live births in 1983, while the postneonatal death rate dropped by 2.8 percent to 3.5 deaths per 1,000 live births.

Age and Sex

- Table 4–2 shows that in 1983, 55.1 percent of all infant deaths were male and 44.9 percent were female. The sex distribution of neonatal deaths was 54.4 percent males and 45.6 percent females, while postneonatal deaths consisted of 56.5 percent males and 43.5 percent females. Overall, male neonatal deaths comprised 34.9 percent and female neonatal deaths 29.3 percent of all infant deaths.

- Nearly two-thirds of all infant deaths occurred during the first 27 days of life (neonatal period). Infant deaths occurring in the first 24 hours accounted for 31.4 percent of all infant deaths, while deaths to infants ages 1–6 days comprised 22.3 percent of the total.

Age-Adjusted Death Rates by Race of Child

- The infant and perinatal death rates in Table 4–3 have been adjusted for age of mother and were calculated only for single births using the California Birth Cohort File. The age adjustment and restriction to single births enable more accurate mortality comparisons to be made over time. Due to these and other technicalities, rates in Table 4–3 do not match those in Table 1–1 or 4–1 and are lower. Postneonatal and infant death rates for 1983 were not available from the Birth Cohort File for Table 4–3. Refer to Chapter 6 for more detail on the Birth Cohort File and the age-adjusted death rates.

- The 1983 age-adjusted neonatal death rate of 5.5 neonatal deaths per 1,000 total single live births, down from 5.6 in 1982, was the lowest rate since 1960 when the rate was 15.5.

- California's age-adjusted perinatal death rate (the number of fetal deaths of 20 or more weeks gestation plus neonatal deaths per 1,000 total single births) fell by 7.0 percent to a rate of 12.0 in 1983. This represents the largest decrease in the perinatal rate in a single year since 1960.

- Infant death rates adjusted by age fell in 1982 for White Spanish and Blacks by 9.1 and 3.3 percent respectively, but increased by 3.5 percent for White non-Spanish. (1983 age-adjusted infant and postneonatal death rates were not available for this publication.)

- Despite substantial declines in the age-adjusted Black infant death rate, the 1982 rate is still 85.0 percent higher than the White Spanish infant death rate and 66.3 percent higher than the White non-Spanish rate.

Selected Causes of Infant Deaths

- Table 4–4 shows that in 1983, 44.7 percent of infant deaths and 66.0 percent of neonatal deaths were associated with "Certain Conditions Originating in Perinatal Period." Within this category, the highest concentrations of infant and neonatal deaths resulted from conditions that originated during early infancy. Prominent during this period was "Respiratory Distress Syndrome" (ICD-769, Ninth Revision), which was responsible for 9.0 percent of infant deaths and 13.0 percent of neonatal deaths. "Other Respiratory Conditions of Fetus and Newborn" (ICD-770, Ninth Revision) accounted for 7.7 percent of infant deaths and 10.5 percent of neonatal deaths. "Disorders Relating to Short Gestation and Unspecified Low Birthweight" were responsible for 7.6 percent of all infant deaths and 11.8 percent of all neonatal deaths during 1983.

- "Causes Specific to Perinatal Period," namely congenital anomalies, accounted for 24.3 percent of the infant deaths and 27.7 percent of the neonatal deaths. The congenital anomalies responsible for the highest proportion of infant and neonatal deaths were those of the "Heart/Circulatory System," which were reported as the cause of death for 9.7 percent of all infant deaths and 8.9 percent of all neonatal deaths.

Almost three-quarters of all postneonatal deaths (1,135) were due to "Causes Not Specific to Perinatal Period." The largest single cause of death within this group was "Sudden Infant Death Syndrome" (SIDS ICD-798, Ninth Revision). There were 616 postneontal deaths and 34 neonatal deaths due to SIDS in 1983.

DEATHS

Number and Rate

The number of resident deaths in 1983 was 188,018, down slightly from the 188,255 deaths reported in 1982. As shown in Table 1–1, the 1983 figure represents the second highest number of deaths since 1950.

The crude death rate dropped from 7.6 deaths per 1,000 population in 1981 and 1982 to 7.5 in 1983. Since 1976, the crude death rate has ranged from 7.5 to 7.8.

Sex and Age

Of all 1983 deaths, 67.4 percent were to residents 65 years old and over; deaths to residents 55 and over accounted for 81.7 percent (Table 5–4). Since the life expectancy of females is greater than that of males, female deaths were more heavily concentrated in the older age groups than were deaths to males. Female residents 55 and over accounted for 86.6 percent of all female deaths, while 77.4 percent of all male deaths occurred among men ages 55 and over.

As in 1982, the number of male deaths was greater than the number of female deaths in all of the five-year age groups through age 79 (Table 5–4). The ratio of male to female deaths ranged from 1.2 for the 1–4-year age group to a high of 3.4 for the 20–24-year age group, then fell to 1.1 for 75–79 year-olds. In the 80–84-year age group, female deaths were 1.2 times greater than male deaths; among those 85 years and over the number of female deaths was almost twice as high as the number of male deaths.

Sex and Age-Specific Death Rates

In 1983, the male death rate was 798.9 per 100,000 population, down 2.9 percent from 1982. The 1983 female death rate of 695.6 was 1.1 percent lower than the 1982 rate (Table 5–3). Since 1981, the male death rate has fallen by 3.2 percent and the female death rate by 1.0 percent.

The 5–14 year-old age group with 26.5 deaths per 100,000 population had the lowest age-specific death rate of any of the age groups in 1983 (Table 5–3). The highest age-specific death rates were 5,966.0 per 100,000 population for 75–84 year-olds and 15,159.2 for persons 85 and over.

From 1982 to 1983, death rates declined for all age groups except 1–4 and 5–14 year-olds, which increased by 0.4 percent and 1.1 percent respectively. These slight increases followed drops in the death rates for both of these age groups from 1981 to 1982. The largest decrease in age-specific death rates between 1982 and 1983 was 7.2 percent for 15–24 year-olds.

Age-specific death rates for males in all age groups decreased from 1982 levels. The largest drop was 6.9 percent for 15–24 year-olds, followed by 5.3 percent for 1–4 year-olds, and 5.1 percent for 65–74 year-olds. The death rates for males ages 75–84 and 85 and over dropped by 2.9 and 1.7 percent, respectively, after increasing between 1981 and 1982.

- Female age-specific death rates decreased from 1982 to 1983 for all except the three youngest age groups (under 1, 1–4, and 5–14) and the oldest age group (85 and over). The death rate for females ages 5–14 rose by 7.9 percent over 1982, following a 5.2 percent increase for the previous year. Females ages 1–4 showed an increase in the age-specific death rate of 8.3 percent after the rate fell by 11.3 percent in 1982. The 2.0 percent increase in the death rate for female children under one year of age followed a drop of 4.8 percent from 1981 to 1982. As with males, the largest decrease in age-specific death rates for females was for 15–24 year-olds, falling by 8.5 percent from the previous year.

Ten Leading Causes of Death

- This report uses the Ninth Revision of the ICD (International Classification of Diseases) codes that was adopted in 1979. Since cause of death codes under the ninth revision are not totally comparable to earlier revisions, caution should be taken when making historical comparisions of death by cause. Cause of death comparability is covered in more detail in Chapter 6.

- The ten leading causes of death to California residents in 1983 remained the same as in 1982 with one exception: "Diabetes Mellitus" replaced "Atherosclerosis" as the tenth ranking cause of death (Table 5–1). The ten leading causes of death were responsible for 85.2 percent of all 1983 deaths. The four leading causes "Diseases of the Heart," "Malignant Neoplasms," "Cerebrovascular Disease," and "Accidents and Adverse Effects" together accounted for 71.3 percent of all deaths. "Diseases of the Heart" was responsible for 35.4 percent of the total deaths among California residents in 1983, while deaths due to "Malignant Neoplasms" (cancer) accounted for 22.9 percent of the total.

- "Diseases of the Heart" claimed 66,552 lives in 1983, 1.0 percent fewer than in 1982. The death rate for "Diseases of the Heart" also dropped in 1983 to 264.2 deaths per 100,000 population, a decrease of 3.0 percent.

- "Malignant Neoplasms" accounted for 43,058 deaths in 1983, a slight increase over 1982 of 0.7 percent. The death rate for "Malignant Neoplasms" was 171.0 per 100,000 population, down 1.3 percent from 1982.

- Deaths due to "Cerebrovascular Disease" decreased by 4.3 percent to 14,939, while the death rate fell by 6.2 percent to 59.3 per 100,000 population.

- There were 9,448 deaths attributed to "Accidents and Adverse Effects" during 1983, 3.9 percent fewer than in 1982. The corresponding death rate dropped by 5.8 percent, to 37.5 per 100,000 population.

- Deaths due to "Pneumonia and Influenza" showed the greatest increases in both number and rate of any of the ten leading causes of death in 1983. The number of "Pneumonia and Influenza" deaths jumped by 10.1 percent to 6,021, while the death rate climbed to 23.9 deaths per 100,000 population, an increase of 8.1 percent.

- The number of deaths due to "Chronic Obstructive Pulmonary Disease and Allied Conditions" rose to 7,093, a gain of 6.5 percent, while the death rate increased by 4.4 percent.

- Deaths due to "Diabetes Mellitus" rose by 1.7 percent, replacing "Atherosclerosis" as the tenth ranking cause of death in 1983. The death rate for "Diabetes Mellitus," however, remained at the 1982 level of 10.7 deaths per 100,000 population.

- For the third straight year, the largest decrease in the number and rate of deaths among the ten leading causes was for "Homicide." The number of "Homicide" deaths dropped by 5.7 percent to 2,702, while the death rate fell by 7.8 percent.

- "Suicide," the eighth ranking cause of death among Californians, also fell during 1983, to 3,635, a drop of 3.1 percent. The corresponding death rate decreased by 5.3 percent, to 14.4 per 100,000 population.

- "Chronic Liver Disease and Cirrhosis" was responsible for 4,027 deaths, down by 2.8 percent from 1982. The death rate fell to 16.0, a decrease of 4.8 percent.

Leading Causes of Death by Sex and Age

- Among infants 83.9 percent of male deaths and 85.1 percent of female deaths in 1983 were from "Certain Conditions Originating in the Perinatal Period," "Congenital Anomalies," and "Sudden Infant Death Syndrome" (SIDS).

- "Diseases of the Heart" and "Accidents and Adverse Effects" both ranked as the leading cause of death for males ages 35–44, each accounting for 19.3 percent of 1983 deaths in this age group. For males 45 and over, "Diseases of the Heart" and "Malignant Neoplasms" ranked first and second as leading causes of death for each age group.

- "Malignant Neoplasms" and "Diseases of the Heart" ranked first and third as leading causes of death for females ages 35–44. For females 45–74, "Malignant Neoplasms" and "Diseases of the Heart" ranked first and second as leading causes of death for each age group. For females age 75 and over, "Diseases of the Heart" ranked first as the leading cause of death and "Malignant Neoplasms" ranked second.

- Several other conditions appear among the five leading causes of death for the older age groups. In 1983, these included "Chronic Liver Disease and Cirrhosis" for both men and women ages 55–64, "Cerebrovascular Disease" for women age 45 and over and for men age 55 and over, "Chronic Obstructive Pulmonary Disease and Allied Conditions" for both men and women age 55 and over, "Pneumonia and Influenza" for men age 65 and over and women age 75 and over, "Diabetes Mellitus" for women age 65 and over, and "Atherosclerosis" for women age 75 and over.

- After reaching one year of age, both males and females become increasingly susceptible to death by violent causes. In 1983, "Accidents and Adverse Effects" was the number one cause of death for both males and females ages 1–34, tied for number one with "Diseases of the Heart" for males ages 35–44, and was second to "Malignant Neoplasms" for females ages 35–44. "Motor Vehicle Accidents" was the chief cause of accidental deaths for males, ages 1–44 and for females, ages 5–44. "Drownings" was the chief cause of accidental death among females, ages 1–4 and the second cause of accidental death for other females under age 25. "Poisoning by Drugs, Medicaments, and Biologicals" was the second cause of accidental deaths for persons ages 25–44. For persons ages 45–54, "Accidents and Adverse Effects" drops to the fourth leading cause of death for males and the fifth leading cause of death for females. For persons age 55 and over, "Accidents and Adverse Effects" is not among the five leading causes of death.

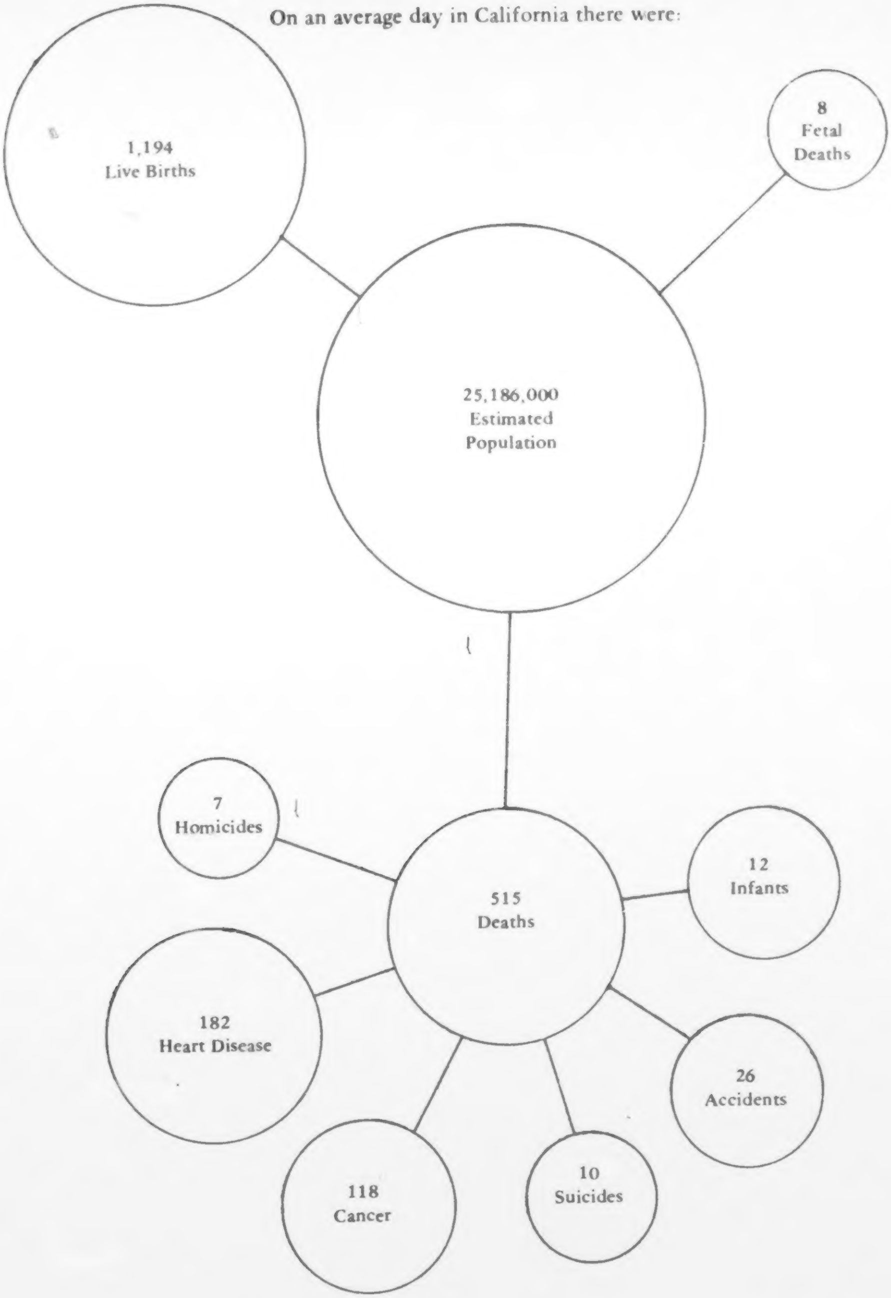
- "Homicide" appeared as a leading cause of death for both males and females as early as ages 1–4, and was the second leading cause of death for males and females ages 15–24. "Suicide" appeared as a leading cause of death for males ages 5–14 and was the third leading cause of death for both males and females ages 5–14. For ages 25–34, "Homicide" and "Suicide" ranked third and second as leading causes of death for males and ranked third and fourth for females. Although deaths by violent causes affected both sexes, the number of deaths was much greater for males. In both the 15–24 and 25–34 year age categories male deaths from violent causes were more than four times greater than female deaths, accounting for 5,638 male deaths and 1,396 female deaths to Californians ages 15–34 years.

- California's leading causes of death in 1983 differed from 1982 in a number of areas. "Diseases of the Heart" moved into the top five causes of death for infants under one year and from fifth to fourth rank for females ages 1–4 years. "Suicide" moved into the top five causes of death for males ages 5–14. "Homicide" accounted for proportionately more deaths in 1983 for males ages 5–24 and proportionately fewer deaths for females ages 5–14. "Homicide" and "Suicide" accounted for proportionately fewer deaths in 1983 for both males and females, ages 25–34. In 1983, "Homicide" moved out of the five leading causes of death for males, ages 35–44. Accidental deaths dropped proportionately in 1983 for males and females, ages 1–4 and 35–54, and increased for females, ages 15–34. Cancer became the chief cause of death for women ages 65–74 years and moved from the third to he second cause of death for women 75 years and older.

Figure 1–A

1983 VITAL EVENTS IN CALIFORNIA

On an average day in California there were:



1,194
Live Births
8
Fetal
Deaths
25,186,000
Estimated
Population
7
Homicides
515
Deaths
12
Infants
182
Heart Disease
26
Accidents
118
Cancer
10
Suicides

Note: Based on a 365 day year.

a Rates and ratios are not calculated for fewer than 5 events.
b Fetal death ratios and infant death rates are not calculated for counties reporting fewer than 1,000 live births.

Note: Maternal deaths are those due to complications of pregnancy, childbirth, and the puerperium, *Ninth Revision International Classification of Diseases 630–676.*
Infant deaths are those under 1 year. Neonatal deaths are those under 28 days.
Fetal deaths of 20 weeks or more gestation are required by law to be registered. However, fetal death registration is believed to be incomplete. Death and live birth rates are per 1,000 estimated population. Infant death rates and fetal death ratios are per 1,000 live births.

[1] The general fertility rate is the total number of live births, regardless of age of mother, per 1,000 women of childbearing age (15–44 years).

[2] The total fertility rate is the sum of each age-specific live birth rate multiplied by the number of years in the age group (five years in this case).

[3] An age-specific live birth rate is the number of live births per 1,000 women in a specific age group. For women under 15, the rate is calculated using the female population 10–14 years of age, and for women over 44, using the female population 45–49 years of age.

[a] Based on 100 percent of births in selected states and on a 50 percent sample of births in all other states.

[b] Based on a 50 percent sample of births.

[1] The general fertility rate is the total number of live births, regardless of birth order, per 1,000 women of childbearing ages (15–44 years).

[a] Based on 100 percent of births in selected states and on a 50 percent sample of births in all other states.

[b] Based on a 50 percent sample of births.

Note: Live births with unknown birth order were distributed proportionally to live births with known birth order, before rates were calculated.

Rates are per 1,000 women aged 15–44 years.

[1] The general fertility rate is the total number of live births of specified birth order, regardless of age of mother, per 1,000 women of childbearing ages (15–44 years).

Note: Live births with unknown birth order were distributed proportionally to live births with known birth order before rates were calculated.

Rates are per 1,000 women in a specified age group. For women under 15, the rate is calculated using the female population 10–14 years of age, and for women over 44, using the female population 45–49 years of age.

Rates in brackets exceed the corresponding 1970 rates.

[1] All live births with at least one type of congenital anomaly.
[2] Each type of congenital anomaly contains only those births with that anomaly.
[3] See Figure 2—C, page 211, for definitions of congenital anomaly codes.
[4] Birth records with "unknown congenital anomalies" include those that do not state whether or not there are congenital anomalies.

Note: Congenital anomalies which were not detected at the time of birth are not included in this table.

Source: State of California, Department of Health Services, Birth Records.

Figure 2—C

CONGENITAL ANOMALIES CODE DEFINITIONS

CENTRAL NERVOUS SYSTEM (CNS)

01 Anencephaly (740.0) with or without spina bifida. Include craniorachisis (740.1) and iniencephaly (740.2).

02 Open spina bifida (741.0, 741.9). If hydrocephalus is also present, enter code 05 in addition to code 02.

03 Encephalocele (742.0).

04 Microcephalus (742.1).

05 Hydrocephalus (741.0, 742.3). If spina bifida is also present, enter code 02 in addition to code 05.

06 Other anomalies of central nervous system. (Remainder of 740–742).

EYE

07 Anophthalmos (743.0).

08 Congenital cataract (743.3).

09 Coloboma (743.4). Exclude other anomalies of anterior segments.

10. Other anomalies of eye. (Remainder of 743).

EAR, FACE, NECK

11 Branchial clefts (744.4).

12 Other anomalies of ear, face, and neck. (Remainder of 744).

CARDIAC

13 Truncus arteriosus (745.0).

14 Transposition of great vessels (745.1).

15 Tetralogy of Fallot (745.2).

16 Ventricular septal defect (VSD) (745.4).

17 Atrial septal defect (ASD) (745.5).

18 Endocardial cushion defects (745.6).

19 Valve stenosis and insufficiency (746.0–746.6).

20 Hypoplastic left heart syndrome (746.7).

21 Patent ductus arteriosus (747.0).

22 Coarctation of aorta (747.1).

23 Other anomalies of heart and circulatory system. (Remainder of 745–747).

RESPIRATORY SYSTEM

24 Bilateral choanal atresia (748.0).

25 Agenesis, hypoplasia and dysplasia of lung (748.5).

26 Other anomalies of respiratory system. (Remainder of 748).

CLEFT PALATE, LIP

27 Cleft palate (749.0).

28 Cleft lip (749.1).

29 Cleft palate with cleft lip (749.2).

DIGESTIVE SYSTEM

30 Tracheo-esophageal fistula, esophageal atresia and stenosis (750.3).

31 Atresia and stenosis of large intestine, rectum, and anal canal (751.2).

32 Other anomalies of digestive system. (Remainder of 750–751).

GENITO-URINARY SYSTEM

33 Hypospadias and epispadias (752.6).

34 Indeterminate sex and pseudohermaphroditism (752.7).

35 Renal agenesis (753.0). Include bilateral only.

36 Cystic kidney disease (753.1).

37 Congenital ureteral obstruction (753.2).

38 Exstrophy of urinary bladder (753.5).

39 Other anomalies of genito-urinary system. (Remainder of 752–753).

MUSCULOSKELETAL DEFORMITIES

40 Hip dislocation without CNS (754.3).

41 Talipes or clubfoot (754.5–754.7).

42 Accessory thumbs or preaxial polydactyly (755.0). Exclude other accessory digits.

43 Missing extremity, partial or complete (755.2–755.4).

44 Syndromes of craniosynostosis (756.0). Exclude acrocephaly, hypertelorism, and oxycephaly.

45 Chondrodystrophy (756.4).

46 Anomalies of diaphragm (756.6).

47 Anomalies of abdominal wall (756.7). Exclude umbilical hernia.

48 Other anomalies of musculoskeletal system. (Remainder of 754–756).

49 **SKIN, NAILS, HAIR** (757.0–757.9).

50 **VISIBLE AMNIOTIC BANDS** (658.0).

CHROMOSOMAL ANOMALIES

51 Down's syndrome (758.0).

52 Autosomal trisomies. Include 13 (758.1) and 18 (758.2).

53 Abnormalities of sex chromosomes. Include Turner's (758.6) and Klinefelter's (758.7).

54 Other conditions due to chromosome anomalies. (Remainder of 758).

55 **OTHER AND UNSPECIFIED CONGENITAL ANOMALIES** (759.0–759.9 except 759.7).

98 **MULTIPLE NONSPECIFIC ANOMALIES** (759.7)

1 All live births with at least one type of congenital anomaly.
2 Each type of congenital anomaly contains only those births with that anomaly.
3 See Figure 2—C, page 211, for definitions of congenital anomaly codes.
4 Birth records with "unknown congenital anomalies" include those that do not state whether or not there are congenital anomalies.

Note: Congenital anomalies which were not detected at the time of birth are not included in this table.

[1] Direct method of adjustment to 1960 California single total births by age of mother, excluding age unknown.

[2] Fetal and perinatal death rates are per 1,000 total single births; neonatal and infant death rates are per 1,000 single live births; postneonatal death rates are per 1,000 infants surviving 28 days or more.

[3] Fetal deaths under 20 weeks' gestation are excluded.

[4] Fetal death rates include some induced terminations.

[5] Not strictly comparable to the category "Mexican-American" used in this report for live births and fetal deaths. For method used to classify Spanish, see Robert W. Buechley, "A Reproducible Method of Counting Persons of Spanish Surname," *Journal of the American Statistical Association*, 56:88–97, 1961. Blacks with Spanish surnames included in "Black" race category.

[a] Provisional.

NA Not available.

Note: Figure in parenthesis is standard error of rate.

6. SOURCES, QUALITY AND LIMITATIONS OF DATA

VITAL STATISTICS REGISTRATION

History of Vital Statistics Registration

Less than a decade after the formation of California State Government in 1850, a law was enacted requiring the state registration of vital events. The law was repealed in 1860; registration of births and deaths was then done by local offices and was incomplete. Effective statewide registration of births, deaths, and marriages began in California in 1905 when the Bureau of Vital Statistics was established to direct the maintenance of a statewide registration and reporting system. Statewide registration and reporting of births, deaths, and marriages has continued without interruption since that date. California was admitted to the United States Death Registration Area in 1906, to the Birth Registration Area in 1919, to the Marriage Registration Area in 1957, and to the Divorce Registration Area in 1968.

In 1962, a statewide reporting system for divorces and annulments was established. Because the report of final decree contained very few items of information, only a limited index and simple counts by county were available. A more extensive divorce reporting system went into effect in 1966, requiring that initial complaints and final decrees be reported. In 1978 the Legislature sharply reduced the scope of California's marriage dissolution reporting system and in that same year California was dropped from the U. S. Divorce Registration Area. Since 1978, county clerks report to the State Registrar only type of final decree, county case number, spouses' names, and date decree granted. The Family Law Act of 1969, implemented January 1, 1970, removed adversary proceedings, changed the name of the decrees of marital dissolution, and reduced the waiting period from initial filing to final decree.

From 1905 through 1939, a stillbirth required filing both a birth and a death certificate. The birth certificate contained an item requiring the attendant at birth to indicate whether or not the child was born alive. Processing of these birth certificates was exactly the same as for certificates of live birth, except that they were excluded from the live birth tabulations. Beginning in 1940, stillbirths were registered on a Certificate of Stillbirth, which has been known as a Certificate of Fetal Death since 1952.

Registration Systems at Present

In California, the registration of vital events is uniformly governed by statutory provisions set forth in Division 9 of the California Health and Safety Code. The Director of Health Services is the State Registrar of Vital Statistics. Forms, standards, and guidelines are provided by the Office of State Registrar, State Department of Health Services. (See "The Vital Statistics System in California," inside front cover, for further functional definitions.)

Live Birth, Death, and Fetal Death Registration

Births, deaths, and fetal deaths are registered with the local registrar in the county where the event took place. Registration forms are furnished by the State Registrar. Local registrars prepare and maintain copies of original certificates; original certificates are then mailed to the State Registrar, indexed, and filed as permanent records.

The Health and Safety Code names local health officers of approved full-time local health departments as local registrars. Forty-six of California's 58 counties have approved full-time local health departments. In the 12 counties (Alpine, Amador, Calaveras, Glenn, Lassen, Mariposa, Modoc, Mono, San Benito, Sierra, Siskiyou, and Trinity) without approved full-time health departments, local registrars are appointed by the State Registrar.

Each live birth must be registered with the local registrar within ten days following the birth. For births occurring in a hospital, the hospital administrator or designee is responsible for registering the birth. For out-of-hospital births, the physician or other person in attendance is responsible for the registration; if no attendant is present, one of the parents must complete the registration (Health and Safety Code, Division 9, Chapter 3, Article 1).

Each fetal death in which the fetus has advanced to or beyond the 20th week of uterogestation must be registered with the local registrar within five days following delivery, prior to any disposition of the fetus (Health and Safety Code, Division 9, Chapter 4, Article 1). It is the responsibility of the attending physician or the coroner to certify the cause of death. It is the responsibility of the funeral director, or person acting in lieu thereof, to obtain all information other than that in the medical and health section, and to register the certificate.

Each death must be registered with the local registrar within five days after the death occurs, prior to any disposition of the human remains. The persons charged with this responsibility are the funeral director, or person acting in lieu thereof, and the physician in attendance or the coroner (Health and Safety Code, Division 9, Chapter 5, Article 1).

It is the responsibility of the physician last in attendance to complete the medical and health section of the death certificate, including the cause of death. However, in the event that no physician was in attendance within 20 days of the death, or the physician is unable to state the cause of death, the death becomes a coroner's case. In all cases where suicide or homicide is suspected, or where there was an accident or injury, it is the coroner's duty to investigate the death.

Marriage and Marriage Dissolution Registration

Licensed marriages are registered in the county in which the marriage license was issued; the county recorder is the local registrar of marriages. The county clerk is responsible for issuing the license to marry and obtaining information required on the Certificate of Registry of Marriage, which is furnished by the State Registrar. Each marriage must be registered with the local registrar by the person performing the ceremony within four days after the ceremony (Health and Safety Code, Division 9, Chapter 6, Article 2). The county recorder is responsible for transmitting the Certificate of Registry of Marriage to the State Registrar.

As of January 1, 1984, nonlicensed marriages have been registered in the county where the authorization took place. Prior to this time, nonlicensed marriages were registered in the county where the marriage took place. The person officiating at the marriage must file a Certificate of Confidential Marriage with the county clerk within four days of the ceremony. The Certificate is provided by the State Registrar. It is filed by the county clerk as a ". . .permanent record which shall not be open to public inspection except upon order of the superior court issued upon a showing of good cause." The number of certificates filed is reported by the county clerk to the State Registrar on forms provided by the Registrar. (Legislation which took effect January 1, 1982 changed procedures for Section 4213 marriages. See Data Matters Topical Report, *California Nonlicensed Marriages—A First Look at Their Characteristics*, No. 81-10037, December, 1981, State of California, Department of Health Services, Center for Health Statistics).

Certificates of Final Decree of Dissolution of Marriage, Judgment of Nullity, or Legal Separation are transmitted to the State Registrar by the county clerk of the county in which the decree was granted.

Because of a staffing shortage and a higher priority assigned to birth and death analysis, statistical compilation and analysis of data from the certificates of marriage and dissolution of marriage have not been included in this report. Subsequent publications will make these data available as they are released from the Office of State Registrar.

SOURCES AND QUALITY OF VITAL STATISTICS DATA

Records

Vital statistics records of the State Department of Health Services are the source of data presented in this report. These records include certificates of live birth, death, fetal death, registry of marriage, and reports of marriage dissolution granted.

Births, Deaths, and Fetal Deaths

Certificates of live birth, death, and fetal death that occur out of state are reallocated to the state of residence. In this report, events occurring out of state to California residents are included in tables subtitled "by place of residence." Mortality and natality data have been tabulated by place of residence since 1945; in all years since then, except 1947, reallocated certificates have been included in California residence data.

Reallocation of birth, death, and fetal death certificates to the state of residence has been virtually complete within the United States since 1955. This was made possible by a cooperative program among the states to exchange copies of certificates for nonresident events. There is no reallocation of records for events occurring in foreign countries.

California birth registration is considered to be complete for births occurring in California, and nearly so for out-of-state births to California residents. An extensive study of the completeness of birth registration was conducted by the Bureau of the Census.[7] It found that during a five-year period in the United States, birth registration was 99.2 percent complete.

Death registration is considered to be almost 100 percent complete because a death certificate must be filed before a burial permit is issued. Some underregistration may occur for deaths of children under one year of age, and particularly to children dying in the first day of life.

Though no thorough study of the completeness of California's fetal death registration has been conducted recently, it appears that the legally mandated death registration of fetuses that have advanced to or beyond the 20th week of gestation is not complete. The extent and consistency of such nonreporting is unknown at this time.

California Birth Cohort File

In population research, a cohort is a group of individuals who have experienced the same significant demographic event during a specific period of time (usually a year), and who may be identified as a group at successive later dates by this common demographic experience. Cohort studies enable accurate descriptions of changes occurring in a specific group of individuals over time. The most common and important cohort is a birth cohort, persons born during the same year or years.

Since 1965, the Department of Health Services has linked California's live births and infant deaths on computer tapes to create the California Birth Cohort File. Each cohort consists of records of all the live births and fetal deaths of 20 or more weeks' gestation that occur in a calendar year. The death records of infants in the cohort who die during their first year of life are then matched and linked to their live birth records to complete the California Birth Cohort File. Rates computed from this file are a direct measure of the incidence of infant loss because they represent a follow-up of the mortality experience of a particular group (cohort) of infants from birth to one year of age.

The Birth Cohort File may be used to compute fetal, neonatal, perinatal, postneonatal, and infant mortality rates for a number of characteristics of the mother and child that are only available on the birth and fetal death certificates, such as age of mother, age of father, birth order, place of delivery, trimester prenatal care began, birthweight, gestational age, and race/ethnicity.

Studies have shown that the designation of race/ethnicity for the birth certificate is more accurate than for the death certificate.[8] The Birth Cohort File enables more accurate death rates by race of child, since race for both the numerator and the denominator are taken from the birth certificate information. The category "White Spanish" for race of child in the Birth Cohort data is not strictly comparable to "Mexican-American" used in this report for live births and fetal deaths. The Birth Cohort assignment is made by computer identification of Spanish surname,[9] while for live births and fetal deaths, race of child is generated from mothers' and/or fathers' identification of their own race/ethnicity from multiple-choice lists.

Quality Control Procedures

Because about a million California certificates are processed annually, errors can be introduced into vital statistics data unless provisions are made for appropriate quality control measures. Selected certificate information is key-entered and verified onto computer tapes which are then edited for completeness and accuracy. Finally, a sample of records is reviewed to identify random errors. Error rates in the aggregate are less than one percent, and identified errors are corrected.

Shipley, "A Closer Look at Race Differentials in California's Infant Mortality, 1965–67," ***Health Services and Mental Health Administration Health Reports***, Vol. 86, No. 9: 810–814, September 1971; Frost, F. and Shy, K. K.: "Racial Differences Between Linked Birth and Infant Death Records in Washington State," ***American Journal of Public Health***, Vol. 70, No. 9: 974–976, September 1980.

[9] For method used to classify Spanish, see Robert W. Buechley, "A Reproducible Method of Counting Persons of Spanish Surname," ***Journal of the American Statistical Association***, 55:88–97, 1961. Blacks with Spanish surnames are included in "Black" race category.

Population

Vital statistics provide better measures of health status when they are related to the characteristics of the population. Because human populations vary in size and composition, and the number of vital events that occur depends on both these factors, *rates* or *ratios* are used to make accurate comparisons. These control for population variability by reporting the number of events *per unit of population* (or other standard denominator).

The population data used as denominators for calculating rates of vital events per unit of population are prepared by the Population Research Unit of the California Department of Finance. The data employed include the resident military and civilian populations, as of July 1, for each year.

Quite often the most appropriate and current population denominators are not readily available and modifications must be made to existing population data. To arrive at the most appropriate population estimate with suitable age-sex detail, it was necessary to incorporate the most current county population estimates, which do not provide age-sex detail, with the latest population projections, which do. The projections, for each given year, were brought up or down to match the latest county population estimates. This procedure was followed for the years 1980–1983. Intercensal years prior to 1980 have already been adjusted by the Population Research Unit to reflect the respective censuses and were used as adjusted. This Office revises its population denominators as the population data are revised by the Population Research Unit. For these reasons, care should be taken when comparing rates to earlier publications.

LIMITATIONS OF DATA

Limitations of the data must be recognized before valid interpretation is possible. For vital statistics data, these limitations are related to difficulties in reporting and classifying information and to some underregistration of events. It is necessary to exercise particular caution when evaluating vital statistics trend data because medical concepts, legal codes, definitions concerning vital statistics events, estimates of the population, race, and methods of assigning causes of death change over time.

Cause of Death

One of the most important uses of vital statistics data is the study of trends over time in the number and rate of deaths, by cause of death. Vital statistics trend research yields invaluable information on the health status of the population, and discloses which health and medical programs are succeeding. Even more importantly, studies of cause-of-death trends help identify emerging public health problems, so that remedial strategies can be developed and needed resources focused and applied.

However, vital statistics trend data are complicated by technical difficulties which limit the comparability of data over time. Changes in the method of assigning or coding causes of death are perhaps the greatest concern.

Cause-of-death statistics are derived from the medical certification information reported on the death or fetal death certificate by the attending physician or coroner. The medical certification item on certificates of death and fetal death makes provision for the reporting of three causes of death—immediate, intervening, and underlying—plus additional information related to the cause of death. The cause of death selected for coding and tabulating in this report is the "underlying cause of death," which is generally defined as the disease or injury which initiated the sequence of morbid events leading directly to death.

Causes of death are coded according to the *Ninth Revision International Classification of Diseases (ICD)*, and the *Vital Statistics Instruction Manual Part 2a, Instructions for Classifying the Underlying Cause of Death, 1981*. For the years 1969–1978, the causes of death were coded using the *Eighth Revision International Classification of Diseases, Adapted for Use in the United States (ICDA)*.

Since its inception in 1898, the classification of diseases has been revised approximately every ten years. Each of the decennial revisions has produced some break in the comparability of cause-of-death statistics. These discontinuities have complicated the interpretation of trends in cause-of-death statistics over time. To facilitate trend analyses, comparability ratios between consecutive revisions of the *International Classification* may be calculated and applied. Ratios between the *Ninth Revision* and the *Eighth Revision* have not been calculated for California mortality data. However, the National Center for Health Statistics has published comparability ratios between the *Ninth* and the *Eighth Revisions* for deaths in the United States as a whole.[10] For an approximation, the ratios for the United States may be used to adjust California data for comparability between coding by the *Ninth Revision* (1979 to **1983**), and coding by the *Eighth Revision* (1969–1978). For comparing the latter to 1960–1968 California deaths, see *Data Matters Topical Report*, "Comparability Between 7th and 8th Revisions, International Classification of Diseases," No. 725-0192-601, March 1976, State of California, Department of Health Services, Center for Health Statistics.

Tabulations of Cause of Death

Deaths by cause are presented in this report in several levels of detail. The table headed "Deaths from Each Cause by Sex and Age" presents the frequency of deaths assigned to each underlying cause of death in the Ninth Revision of the ICD for which there were one or more deaths in **1983**. All fourth-digit subcategories are included. This table can be found on the microfiche attached to the inside of the back cover of this report.

Variability of Rates

Vital statistics rates are sensitive to variations in the size of both the numerator (the number of vital events that occurred), and the denominator (the estimated population, or the number of births). For example, in small counties a variation of only a few cases in the numerator can cause a relatively large shift in a rate, while in a large county, it may cause no change at all. Alternatively, a minor revision in the estimate of the population in a small county may cause a relatively major change in a vital rate in that county.

a Twenty-five male deaths were assigned Ninth Revision International List Number 175.

b Sex-specific rates (per 100,000 population). California male and female population for 1983 were 12,417,400 and 12,768,600, respectively.

c Less than 0.050.

d Per 10,000 live births (1983 live births–435,722).

e Per 1,000 live births.

Source: State of California, Department of Finance, ***Population Projections for California Counties by Age and Sex, Baseline 83***, October 83; ***Population Estimates for California Counties, Report 84 E–2***, January 1986. Baseline 83 Population Projections have been adjusted to reflect the Report 84 E–2 County Population Estimates.
State of California, Department of Health Services, Death Records.

All vital rates previously published for the years 1970 through 1981 which are included in this publication have been recalculated, using revised population estimates, adjusted upward to the 1980 Census. Recalculated rates for some counties may differ from those previously published even more than the statewide rates do.

Rates and ratios based on the number of births, instead of the population, are not subject to variability caused by changes in the size of estimated denominators. However, in small counties, these rates are just as sensitive to small shifts in the numerator as are rates based on the population, since few births occur in counties with small populations, and the denominator is correspondingly small.

Sampling Error and Vital Statistics

The number of births and deaths for an area reported in California's Vital Statistics represents complete counts; as such, they are not subject to sampling error, although they are subject to errors in the registration process. However, when the figures are used for analytic purposes, such as comparison of rates over a time period or for different areas, the number of events that actually occurred may be considered as one of a larger series of possible results that could have arisen under the same circumstances.[11] The probable range of values may be estimated from the actual figures according to certain statistical assumptions. The problem of small frequencies is well presented in the Technical Appendix to "The Vital Statistics of the United States, 1978, Volume I, Natality"[12] and is repeated here.

> "In general, distributions of vital events may be assumed to follow the binomial distribution. Estimates of standard error and tests of significance under this assumption are described in most standard statistics texts. When the number of events is large, the standard error, expressed as a percent of the number or rate, is usually small.
>
> "When the number of events is small (perhaps less than 100) and the probability of such an event is small, considerable caution must be observed in interpreting the conditions described by the figures. Events of rare nature may be assumed to follow a Poisson probability distribution. For this distribution, a simple approximation may be used to estimate the error as follows:

---

[11] National Office of Vital Statistics: "Standard Error of the Age-Adjusted Death Rate" by C. L. Chiang. ***Vital Statistics—Special Reports***, Vol. 47, No. 9, Public Health Service. Washington, DC, August 1961.

[12] National Center for Health Statistics: ***Vital Statistics of the United States, 1978***, Vol. I, DHHS Publ. No. (PHS) 82–1100, Public Health Service, Washington, DC, 1982.

"If N is the number of births and R is the corresponding rate, the chances are 19 in 20 that

"1. The 'true' number of events lies between

$N - 2\sqrt{N}$ and $N + 2\sqrt{N}$

"2. The 'true' rate lies between

"$R - 2\frac{R}{\sqrt{N}}$ and $R + 2\frac{R}{\sqrt{N}}$

"If the rate R corresponding to N events is compared with the rate S corresponding to M events, the difference between the two rates may be regarded as statistically significant if it exceeds

$$2\sqrt{\frac{R^2}{N} + \frac{S^2}{M}}$$

"For example, suppose that the observed birth rate for Area A was 15.0 per 1,000 population and that this rate was based on 20 recorded births. Given prevailing conditions, the chances are 19 in 20 that the 'true' or underlying birth rate for that area lies between 8.3 and 21.7 per 1,000 population. Let it be further supposed that the birth rate for Area A of 15.0 per 1,000 population were being compared with a rate of 20.0 per 1,000 population for Area B which is based on 10 recorded births. While the difference between the rates for the two areas is 5.0, this difference is less than twice the standard error of the difference

$$2\sqrt{\frac{(15.0)^2}{20} + \frac{(20.0)^2}{10}}$$

of the two rates which is computed to be 14.3. From this, it is concluded that the difference between the rates for the two areas is not statistically significant."

Time Periods and Geographic Bases

Before 1947, births and deaths were tabulated by year of registration. In 1947 births were tabulated by year of occurrence, while deaths were tabulated by year of registration. Beginning in 1948, births, deaths, fetal deaths, marriages, and marriage dissolutions have been tabulated by the calendar year in which the event occurred.

From 1949 through 1967, deaths in hospitals, sanitariums, and all other institutions were allocated to the previous residence regardless of the decedent's length of stay in the institution. Since 1968, deaths occurring in hospitals, sanitariums, and other resident institutions have been allocated to the last previous residence, unless the decedent resided in the institution for at least one year. All deaths in penal institutions and mental hospitals are allocated to the previous place of residence regardless of the length of stay in the institution.

Race and Ethnicity

Since 1979, information on the race and ethnicity of the father and mother has been reported voluntarily on the birth certificates. This information was mandatory prior to 1979. The percent of birth certificates with race and ethnicity reported was 96.5 in 1979, 98.3 in 1980, 98.6 in 1981, 99.2 in 1982, and 99.2 in 1983. The information obtained from the race and ethnicity items on both the birth and death certificates reflects the certificate informant's own responses.

From 1970 to 1977, the race of father and mother on the birth certificate was coded independently, and the race of child was generated from the parents' codes. Starting in 1978 ethnicity was added to the coding scheme. Race and ethnicity of both parents were then used to generate the race and ethnicity of the newborn child. In 1982, the race/ethnicity categories used for births and fetal deaths were changed in order to be comparable with those used with the 1980 Census and hence, differ greatly from the 1981 categories.

In 1981, race/ethnicity was classified into eight categories for statistical analysis purposes: White, Black, Mexican/American, American Indian, Chinese, Japanese, Filipino, and Other. Statistically speaking, these groups were mutually exclusive, that is, an individual birth could be classified in only one of these categories. For example, the reporting of Mexican/American precluded being classified as White or any of the other groups. However, in 1982, the reporting of race/ethnicity and the reporting of Spanish/Hispanic origin were made completely independent of each other. A birth identified as one of the race/ethnicity groups could also be identified as Spanish/ Hispanic origin (Mexican, Puerto Rican, Cuban, and other Spanish/Hispanic); conversely, a live birth identified as Spanish/Hispanic origin would also be identified as one of the race/ethnicity groups. As a result, a number of the live birth and fetal death tables in this report tabulated by race/ethnicity are repeated for Spanish/Hispanic origin.

In order to get comparable race/ethnicity categories for 1981 and 1982, a scheme was designed to recode the 1982 classifications so that live births could be redistributed into the 1981 mutually exclusive categories (Figure A). In regrouping 1982 data to make it comparable with the 1981 classification, whether a Black person is self-identified as Hispanic or non-Hispanic, Black still takes precedence. (Current rules require that the Black race designation always takes precedence over all the other race groups. A birth to a Black parent is always classified as Black regardless of the race/ethnicity of the other parent.)

The regrouping scheme is as follows:

FIGURE A

1982	Regrouped to be Comparable With 1981
White, Mexican/American	Mexican/American
White, Non-Mexican/American	White
Black, Mexican/American	Black
Black, Non-Mexican/American	Black
American Indian, Mexican/American	Mexican/American
American Indian, Non-Mexican/American	American Indian
Chinese, Mexican/American	Mexican/American
Chinese, Non-Mexican/American	Chinese
Japanese, Mexican/American	Mexican/American
Japanese, Non-Mexican/American	Japanese
Filipino, Mexican/American	Mexican/American
Filipino, Non-Mexican/American	Filipino
Other, Mexican/American	Mexican/American
Other, Non-Mexican/American	Other

When comparing the percent distribution of births in 1981 and 1982 on the basis of this recoding scheme, a lack of comparability was found for American Indians. This race category constituted 0.98 percent of all live births in 1982 compared to only 0.51 percent in 1981. It has not been established if this was a real increase or the result of an improvement in the identification of American Indian births. Most likely, it was a combination of the two. In 1982, administrative procedures were implemented that required some hospitals to document American Indian births in order to be compensated for various child care services.

In this report, tabulations of live births distributed by race/ethnicity are based on the categories adopted in 1982 and are not comparable with tabulations for earlier years. Please refer to *Vital Statistics of California, 1982* for tabulations created by using the recoding scheme to allow for comparisons with data for prior years (Tables 7–1 and 7–2 and microfiche).

For purposes of statistical classifications, entries of "Race Not Specified" and "Unknown" on death certificates are included in the mortality data as "White." Also, entries of "Mexican" are classified as "White" in death tabulations because there are indications that the "Mexican" category has been consistently underreported.

Age

The death certificate contains both the age and the date of birth of the decedent; for computer tabulations, the age at death is generated from the difference between the date of birth and the date of death. For infants living less than 24 hours and for other deaths where date of birth is not reported, the stated age is accepted.

Length of Gestation

Length of gestation is calculated for live births and fetal deaths by subtracting the date the last normal menses began from the date of birth. The accuracy of this calculation is contingent upon the mother's recall of her last menstrual period. If only the month and year are given, the day is imputed. If a date is not reported, no calculation is made. The calculation is made in completed weeks of gestation.

CERTIFICATES AND LISTS OF VARIABLES

The vital statistics data presented in this report constitute only a part of the information reported on vital records. Other variables which were processed for births, deaths, and fetal deaths are shown in this section. Tabulations and cross-tabulations for most of these items can be provided for at cost, upon request.

DEFINITIONS

Following is a glossary of technical terms used in this report:

Place of occurrence:	The place where the event occurred (regardless of place of residence).
Place of residence:	The place where a person lives or maintains legal residency. For live births and fetal deaths, the mother's residence is used.

Births

Childbearing age:	Women 15 through 44 years of age.
Fetal death:	A death prior to the complete expulsion or extraction from its mother of a product of conception (irrespective of the duration of pregnancy); the death is indicated by the fact that after such separation, the fetus does not breathe or show any other evidence of life such as beating of the heart, pulsation of the umbilical cord, or definite movement of voluntary muscles. This definition was promulgated by the World Health Organization in 1950 and is set forth in the California Administrative Code, Title 17, Chapter 1, Article 3. If the fetus is of 20 weeks or more gestational age, the death must be registered with the local registrar.
Live birth:	The complete expulsion or extraction from its mother of a product of conception (irrespective of the duration of pregnancy) which, after such separation, breathes or shows any other evidence of life such as beating of the heart, pulsation of the umbilical cord, or definite movement of voluntary muscles, whether or not the umbilical cord has been cut or the placenta is attached. This definition was promulgated by the World Health Organization in 1950 and is set forth in the California Administrative Code, Title 17, Chapter 1, Article 3.
Total births:	Total deliveries: live births plus fetal deaths.
Live birth order:	The number of live births delivered by this mother including the current birth.
Low birthweight:	A live birth or fetal death weighing less than 2,500 grams (5 pounds, 8 ounces). (Prior to 1979, low birthweight was 2,500 grams or less. This definition complies with a change adopted by the National Center for Health Statistics, beginning with 1979 data.)
Premature:	A live birth or fetal death occurring before the 37th week of gestation.

Deaths

Maternal death:	A death resulting from complications of pregnancy or childbirth.
Fetal death:	(See Births.)
Neonatal death:	A death occurring during the first 27 days of life.
Postneonatal death:	A death occurring between the 28th day and the end of the first year of life.
Perinatal deaths:	All fetal deaths of 20 or more weeks' gestation, plus neonatal deaths.
Infant death:	A death occurring during the first year of life.

RATES AND RATIOS

Birth Rates and Ratios

Age-specific birth rate

$$= \frac{\text{number of live births to women in specific age group}}{\text{estimated female population in that age group}} \times 1{,}000$$

Fetal death ratio

$$= \frac{\text{number of reportable fetal deaths}}{\text{total number of live births}} \times 1{,}000$$

General fertility rate

$$= \frac{\text{number of live births}}{\text{estimated female population 15–44 years old}} \times 1{,}000$$

Live birth rate
(crude birth rate)

$$= \frac{\text{number of live births}}{\text{estimated total population}} \times 1{,}000$$

Total fertility rate = sum of each age-specific birth rate multiplied by the number of years in each age group (e.g., for 5-year groups, 15–19, 20–24, . . . 40–44, the sum of the birth rates for each age group is multiplied by 5).

Death Rates and Ratios

Age-adjusted death rate
(direct method)

$$= \frac{\text{total number of expected deaths in a standard population (if the persons in this population had experienced the same age-specific death rates as the population being adjusted)}}{\text{total standard population}} \times 100{,}000$$

Age-specific death rate

$$= \frac{\text{number of deaths in specific age group}}{\text{estimated population in that age group}} \times 1{,}000 \text{ (or 100,000, as specified)}$$

Death rate
(crude death rate)

$$= \frac{\text{number of deaths}}{\text{estimated total population}} \times 1{,}000$$

Death rate from a
specific cause

$$= \frac{\text{number of deaths from a specific cause}}{\text{estimated total population}} \times 100{,}000$$

Fetal death ratio = (See Births)

$$\text{Infant death rate} = \frac{\text{number of deaths under 1 year of age}}{\text{total number of live births}} \times 1{,}000 \text{ (or 100,000, as specified)}$$

$$\text{Maternal death rate} = \frac{\text{number of deaths due to complications of pregnancy and childbirth}}{\text{total number of live births}} \times 10{,}000$$

$$\text{Neonatal death rate} = \frac{\text{number of deaths under 28 days of age}}{\text{total number of live births}} \times 1{,}000 \text{ (or 100,000, as specified)}$$

$$\text{Postneonatal death rate} = \frac{\text{number of deaths between 28 days of age and 1 year of age}}{\text{total number of live births}} \times 1{,}000 \text{ (or 100,000, as specified)}$$

$$\text{Perinatal death rate} = \frac{\text{number of fetal deaths of 20 or more weeks' gestation, plus neonatal deaths}}{\text{total number of births}} \times 1{,}000 \text{ (or 100,000, as specified)}$$

Item 32. CONGENITAL ANOMALIES (ICD-9). Circle up to five most important anomalies.

CENTRAL NERVOUS SYSTEM (CNS)

01 Anencephaly (740.0) with or without spina bifida. Include craniorachisis (740.1) and iniencephaly (740.2).

02 Open spina bifida (741.0, 741.9). If hydrocephalus is also present, enter code 05 in addition to code 02.

03 Encephalocele (742.0).

04 Microcephalus (742.1).

05 Hydrocephalus (741.0, 742.3). If spina bifida is also present, enter code 02 in addition to code 05.

06 Other anomalies of central nervous system. (Remainder of 740–742).

EYE

07 Anophthalmos (743.0).

08 Congenital cataract (743.3).

09 Coloboma (743.4). Exclude other anomalies of anterior segments.

10. Other anomalies of eye. (Remainder of 743).

EAR, FACE, NECK

11 Branchial clefts (744.4).

12 Other anomalies of ear, face, and neck. (Remainder of 744).

CARDIAC

13 Truncus arteriosus (745.0).

14 Transposition of great vessels (745.1).

15 Tetralogy of Fallot (745.2).

16 Ventricular septal defect (VSD) (745.4).

17 Atrial septal defect (ASD) (745.5).

18 Endocardial cushion defects (745.6).

19 Valve stenosis and insufficiency (746.0–746.6).

20 Hypoplastic left heart syndrome (746.7).

21 Patent ductus arteriosus (747.0).

22 Coarctation of aorta (747.1).

23 Other anomalies of heart and circulatory system. (Remainder of 745–747).

RESPIRATORY SYSTEM

24 Bilateral choanal atresia (748.0).

25 Agenesis, hypoplasia and dysplasia of lung (748.5).

26 Other anomalies of respiratory system. (Remainder of 748).

CLEFT PALATE, LIP

27 Cleft palate (749.0).

28 Cleft lip (749.1).

29 Cleft palate with cleft lip (749.2).

DIGESTIVE SYSTEM

30 Tracheo-esophageal fistula, esophageal atresia and stenosis (750.3).

31 Atresia and stenosis of large intestine, rectum, and anal canal (751.2).

32 Other anomalies of digestive system. (Remainder of 750–751).

GENITO-URINARY SYSTEM

33 Hypospadias and epispadias (752.6).

34 Indeterminate sex and pseudohermaphroditism (752.7).

35 Renal agenesis (753.0). Include bilateral only.

36 Cystic kidney disease (753.1).

37 Congenital ureteral obstruction (753.2).

38 Exstrophy of urinary bladder (753.5).

39 Other anomalies of genito-urinary system. (Remainder of 752–[illegible].

MUSCULOSKELETAL DEFORMITIES

40 Hip dislocation without CNS (754.3).

41 Talipes or clubfoot (754.5–754.7).

42 Accessory thumbs or preaxial polydactyly (755.0). Exclude other accessory digits.

43 Missing extremity, partial or complete (755.2–755.4).

44 Syndromes of craniosynostosis (756.0). Exclude acrocephaly, hypertelorism, and oxycephaly.

45 Chondrodystrophy (756.4).

46 Anomalies of diaphragm (756.6).

47 Anomalies of abdominal wall (756.7). Exclude umbilical hernia.

48 Other anomalies of musculoskeletal system. (Remainder of 754–756).

49 **SKIN, NAILS, HAIR** (757.0–757.9).

50 **VISIBLE AMNIOTIC BANDS** (658.0).

CHROMOSOMAL ANOMALIES

51 Down's syndrome (758.0).

52 Autosomal trisomies. Include 13 (758.1) and 18 (758.2).

53 Abnormalities of sex chromosomes. Include Turner's (758.6) and Klinefelter's (758.7).

54 Other conditions due to chromosome anomalies. (Remainder of 758).

55 **OTHER AND UNSPECIFIED CONGENITAL ANOMALIES** (759.0–759.9 except 759.7).

98 **MULTIPLE NONSPECIFIC ANOMALIES** (759.7)

CERTIFICATE OF FETAL DEATH
MEDICAL DATA SUPPLEMENTAL WORK SHEET
For Hospital Use Only

Item 36. CONGENITAL ANOMALIES (ICD-9). Circle up to five most important anomalies.

CENTRAL NERVOUS SYSTEM (CNS)

01 Anencephaly (740.0) with or without spina bifida. Include craniorachisis (740.1) and iniencephaly (740.2).

02 Open spina bifida (741.0, 741.9). If hydrocephalus is also present, enter code 05 in addition to code 02.

03 Encephalocele (742.0).

04 Microcephalus (742.1).

05 Hydrocephalus (741.0, 742.3). If spina bifida is also present, enter code 02 in addition to code 05.

06 Other anomalies of central nervous system. (Remainder of 740–742).

EYE

07 Anophthalmos (743.0).

08 Congenital cataract (743.3).

09 Coloboma (743.4). Exclude other anomalies of anterior segments.

10. Other anomalies of eye. (Remainder of 743).

EAR, FACE, NECK

11 Branchial clefts (744.4).

12 Other anomalies of ear, face, and neck. (Remainder of 744).

CARDIAC

13 Truncus arteriosus (745.0).

14 Transposition of great vessels (745.1).

15 Tetralogy of Fallot (745.2).

16 Ventricular septal defect (VSD) (745.4).

17 Atrial septal defect (ASD) (745.5).

18 Endocardial cushion defects (745.6).

19 Valve stenosis and insufficiency (746.0–746.6).

20 Hypoplastic left heart syndrome (746.7).

21 Patent ductus arteriosus (747.0).

22 Coarctation of aorta (747.1).

23 Other anomalies of heart and circulatory system. (Remainder of 745–747).

RESPIRATORY SYSTEM

24 Bilateral choanal atresia (748.0).

25 Agenesis, hypoplasia and dysplasia of lung (748.5).

26 Other anomalies of respiratory system. (Remainder of 748).

CLEFT PALATE, LIP

27 Cleft palate (749.0).

28 Cleft lip (749.1).

29 Cleft palate with cleft lip (749.2).

DIGESTIVE SYSTEM

30 Tracheo-esophageal fistula, esophageal atresia and stenosis (750.3).

31 Atresia and stenosis of large intestine, rectum, and anal canal (751.2).

32 Other anomalies of digestive system. (Remainder of 750–751).

GENITO-URINARY SYSTEM

33 Hypospadias and epispadias (752.6).

34 Indeterminate sex and pseudohermaphroditism (752.7).

35 Renal agenesis (753.0). Include bilateral only.

36 Cystic kidney disease (753.1).

37 Congenital ureteral obstruction (753.2).

38 Exstrophy of urinary bladder (753.5).

39 Other anomalies of genito-urinary system. (Remainder of 752–753).

MUSCULOSKELETAL DEFORMITIES

40 Hip dislocation without CNS (754.3).

41 Talipes or clubfoot (754.5–754.7).

42 Accessory thumbs or preaxial polydactyly (755.0). Exclude other accessory digits.

43 Missing extremity, partial or complete (755.2–755.4).

44 Syndromes of craniosynostosis (756.0). Exclude acrocephaly, hypertelorism, and oxycephaly.

45 Chondrodystrophy (756.4).

46 Anomalies of diaphragm (756.6).

47 Anomalies of abdominal wall (756.7). Exclude umbilical hernia.

48 Other anomalies of musculoskeletal system. (Remainder of 754–756).

49 **SKIN, NAILS, HAIR** (757.0–757.9).

50 **VISIBLE AMNIOTIC BANDS** (658.0).

CHROMOSOMAL ANOMALIES

51 Down's syndrome (758.0).

52 Autosomal trisomies. Include 13 (758.1) and 18 (758.2).

53 Abnormalities of sex chromosomes. Include Turner's (758.6) and Klinefelter's (758.7).

54 Other conditions due to chromosome anomalies. (Remainder of 758).

55 **OTHER AND UNSPECIFIED CONGENITAL ANOMALIES** (759.0–759.9 except 759.7).

98 **MULTIPLE NONSPECIFIC ANOMALIES** (759.7)

STATISTICAL INFORMATION AVAILABLE FOR FETAL DEATHS, 1983

VARIABLE	CERTIFICATE ITEM NUMBER
THIS FETUS	
Name (first, middle, last)	1A,B,C
Sex	2
Single, twin, triplet, quadruplet, quintuplet, or more	3A
If multiple birth, birth order	3B
Date of delivery (month, day, year)	4A
Race/Ethnicity of child (determined by race/ethnicity of mother and father)	22,25
Spanish/Hispanic origin (determined by Spanish/Hispanic origin of mother)	26
Birthweight	30
PLACE OF DELIVERY	
Maternity hospital code	5A
Type of hospital	5A
County of occurrence	5D
MOTHER OF CHILD	
Maiden surname	9C
Birthplace	10
Age	11
Race/Ethnicity	25
Spanish/Hispanic origin	26
County of residence	28E
FATHER OF CHILD	
Age	8
Race/Ethnicity	22
Spanish/Hispanic origin	23
MEDICAL AND HEALTH DATA	
Type of certifier	12A
Underlying cause of death	19C
Autopsy	21
Date last normal menses began	29A
Completed days of gestation	4A,29A
Month of pregnancy prenatal care began	29B
Previous deliveries to this mother	31A,B,C,D
Date of last live birth	31E
Date of last termination	31F
Caesarean section	32
Complications of pregnancy	33
Birth injury	34
Complications of labor and delivery	35
Congenital malformations	36
